

Date: 97/4/30, 2018/7/22

Patient name: Z.M

Responsible physician: Dr. Kheradmand

Patient Presentation: 30 years, female

Familial history positive (mother & aunt)

In screening MRI: Extensive microcalcifications in right breast and suspicious enhancement in left breast

In mammography: suspicious microcalcifications in right breast

In ultrasonography: suspicious lesion in right breast, no lesion in left breast

Stereotactic core needle biopsy: DCIS

Question: Breast conserving surgery or mastectomy?

If mastectomy, skin sparing or nipple areolar complex sparing?

Recommended tests: No tests needed

Recommended plan: Skin sparing mastectomy with immediate reconstruction & genetic consult
