

Date: 2018/12/29

Patient's Name: F.A

Responsible Physician: Dr.Omranipour

Patient presentation:

33 yrs, FH negative

Left breast Sarcoma, underwent neo-adjuvant chemotherapy followed by mastectomy and wide chest wall resection which was reconstructed with Latissimus Dorsi flap.

Pathology result: 7 cm, high grade sarcoma, 4 free lymph nodes, all margins free.

Question: Does she need radiotherapy regarding the potentially harmful heart exposure?

Recommended tests: no further test needed

Recommended plan: Potential risks of doing or omitting radiation should be explained for the patient. It must then be carefully planned and performed.
