

Date: 2019/02/09

Patient's Name: Z.MM

Responsible Physician: Dr. Elahi

Patient presentation:

- 45 years – negative family history
- History of oral contraceptive consumption for 15 years
- She experienced bilateral mastalgia recently
- Mammography : BIRADS 0
- Ultrasound : right breast had a 7*4 mm hypoechoic mass at 11 o'clock B4a. left breast had a 22* 10 mm tissue distortion at 4 o'clock B4c
- MRI : right breast was normal . 25*20 mm mass at 4 o'clock of left breast B5.

Core needle biopsy : right invasive lobular carcinoma . left : invasive lobular carcinoma. Fine needle aspiration of axillary lymph nodes was negative.

Question: Plan of surgery ? does she need genetic consult?

Recommended tests: Genetic consult . repeat MRI if breast conservation is considered

Recommended plan: bilateral mastectomy and sentinel lymph node biopsy is recommended although breast conservation is not discouraged
