

Date: 20 July 2019. 98/4/29.

Patient's Name: A.F.

Responsible Physician: Dr. Aghili.

Patient Presentation:

-A 66 year old female with past history of recurrent right breast phyllodes tumor and multiple surgeries (year 98, 93, and 91) with pathology of benign phyllodes(at first) and borderline phyllodes (recently) with free margins referred for consultation about the need for mastectomy.

Question: Regarding multiple recurrences and recent borderline pathology, is mastectomy recommended?

Recommended Plan: Mastectomy is not recommended.
