

Date: 20 July 2019. 98/4/29.

Patient's Name: Z.S.

Responsible Physician: Dr. Roudini.

Patient Presentation:

- A 49 year old female with left breast cancer underwent MST+SLNB.

-Pathology: DCIS, ER: 1-2%, PR-, ki67 10%, no LN involvement. In pathology report it was postulated that because of autolysis of the specimen, determination of invasive component is not possible.

Question: How can invasive component be determined? What should be done about systemic treatment?

Recommended Plan: Pathology review is recommended first.
