

**Date:** 3 Aug 2019. 98/5/12.

**Patient's Name:** B.K.

**Responsible Physician:** Dr. Omranipour.

**Patient Presentation:**

-A 41 year old female with 43mm right breast mass diagnosed as breast cancer(IDC, G3, ER+, PR+, HER2+, Ki67 20%), received NAC followed by BCS+SLNB.

-Pathology: T=2.5cm, 3 LNs without tumoral involvement, involved margins;

-According to margin involvement, patient underwent mastectomy and pathology examination reported no tumor residue and 9 LNs in axillary tail of breast with no tumoral involvement.

**Question:** Is adjuvant RT recommended?

**Recommended Plan:** Adjuvant RT is recommended.
