

Date: 24 Aug 2019 . 98/6/2.

Patient's Name: F.M.

Responsible Physician: Dr.Miri.

Patient Presentation:

-A 48 year old female with past history of bilateral mammoplasty 9 years ago, diagnosed with right breast cancer(low grade DCIS)and underwent BCS followed by adjuvant RT.

-Now she has presented with right breast mass which CNB confirmed IDC. Abdominopelvic CT scan showed suspicious bone lesion in right iliac bone.

Question: Imaging review and plan?

Recommended Plan: Bone scan and iliac bone biopsy should be done.

Abdominopelvic CT scan shows right iliac bone lesion.
