

Date: 31 Aug 2019. 98/6/9.

Patient's Name: K.A.

Responsible Physician: Dr. Jalaeefar.

Patient Presentation:

-A 63 year old female with right breast cancer (IDC, ER+, PR+, HER 2+, ki67 10-12%) underwent NAC followed by MST+SLNB. Sentinel LN was reported to be without tumoral involvement in frozen section analysis, but permanent pathology reported micrometastasis in on LN which had been confirmed with IHC staining.

Question: What should be done about axilla: re-surgery or RT?

Recommended Plan: RT is recommended.
