

Date: 7 Sep 2019. 98/6/16.

Patient's Name: Z.M.

Responsible Physician: Dr. Golfam.

Patient Presentation:

-A 34 year old female with right breast mass diagnosed with breast cancer (VAB:IDC+DCIS, ER+, PR+, HER2 -, Ki67 10%).

-She underwent MST+SLNB (which reported to be involved by tumor in intraoperative frozen section analysis) followed by ALND and immediate prosthesis reconstruction.

-Pathology: IDC+DCIS, 2 involved LNs, superolateral margin involved by DCIS.

-As a classic mastectomy has been done, no further surgery is possible.

Question: What should be done about involved margin?

Recommended Plan: Adjuvant RT is recommended.
