

**Date:** 21 Sep 2019. 98/6/30.

**Patient's Name:** SH.M.

**Responsible Physician:** Dr. Mashayekhi.

**Patient Presentation:**

- A 32 year old female presented with locally advanced breast cancer(ER-, HER-2 3+, Ki67 30%).

-Liver metastasis and pelvic bone lesion was detected in her staging work up and she referred for chemotherapy.

-Post chemotherapy PET scan showed no evidence of distant disease.

**Question:** Is surgical treatment of local disease is recommended?

**Recommended Plan:** Surgery is not recommended now; systemic therapy and follow up is recommended.
