

Date: 26 Oct 2019. 98/8/4

Patient's Name: Z. K.

Responsible Physician: Dr. Alipour

Patient Presentation:

- A 40 year old female with left side breast DCIS
- Surgery: mastectomy + sentinel lymph node biopsy 1 year ago
- Pathology: DCIS, free lymph nodes
- Immunohistochemistry: ER-, PR-, HER2-

Now she requests opposite site mastectomy, She has phobia of cancer

- MRI: two 6 mm lesions, BIRADS IVa
- Target sonography couldn't localize the lesions

MRI biopsy is not available

Question: Is mastectomy possible? If yes, does she need sentinel lymph node biopsy?

Recommended Plan: Mastectomy should consider with performing sentinel lymph node biopsy.
