

**Date:** 2 Nov 2019. 98/8/11.

**Patient's Name:** S. S.

**Responsible Physician:** Dr. Mohagheghi

**Patient Presentation:**

- A64 year old female who had breast cancer 11 years ago
- Surgery: Mastectomy+ sentinel lymph node biopsy+ prosthesis insertion
- Immunohistochemistry: ER +, PR+, HER2 –
- Oncotype Dx score: 12
- Adjuvant treatment: hormone therapy for 4 years (tamoxifen)

She had skin recurrence 6 years ago

- Surgery: excision of involved skin and repair with latissimus dorsi flap
- Immunohistochemistry: ER +, PR+, HER2 –
- Adjuvant treatment: aromatase inhibitor for 2 years

She has skin recurrence again

- Pathology: invasive ductal carcinoma
- Immunohistochemistry: ER +, PR+, HER2 –, Ki67 15%

**Question:** what are the next steps?

**Recommended Plan:** because she does not have compliance for chemotherapy, first treatment with fulvestrant and palbociclib and then resection if it is possible.

Local recurrence in breast cancer
