

Date: 30 Nov 2019. 98/9/9.

Patient's Name: A. S.

Responsible Physician: Dr. Tavakoli

Patient Presentation:

- A55year old female, with history of solitary fibrous tumor of lung 5 years ago
- Ultrasound of breast: 40mm mass in UOQ of left breast
- Incisional biopsy: hemangiosarcoma
- Chest CT scan: bilateral pleural nodules
- Abdominopelvic CT scan: normal
- Systemic treatment: chemotherapy 3 courses
- Chest CT scan after chemotherapy: increasing of size of some nodules and decreasing size of breast mass

Question: what is the next plan?

Recommended Plan: pathologic review of both pathologies, breast lumpectomy, follow up of pleural nodules with CT scan, check of c-Kit
