

**Date:** 21 Dec 2019. 98/9/30.

**Patient's Name:** Z. M.

**Responsible Physician:** Dr. Alipour

**Patient Presentation:**

- A 44year old female with history of right breast cancer 6 years ago
- family history: breast cancer in grandmother and aunt
- Pathology: metaplastic carcinoma, 5.5cm, sentinel lymph node free
- Immunohistochemistry: ER-, PR-, HER2-, Ki67 50%
- Adjuvant treatment: chemotherapy
- Surgery: Breast conserving surgery+ sentinel lymph node biopsy
- Metastasis work-ups: negative
- Genetic consult: advised genetic test
- Breast MRI: BIRADS IV lesion in favor of papillomatosis
- Target sonography: cysts

**Question:** what is the next plan? Does prophylactic mastectomy recommend?

**Recommended Plan:** repeat target sonography by breast specialist radiologist, prophylactic surgery advised after genetic test
