

**Date:** 13 April 2019 . 98/1/24.

**Patient's Name:** S.R.

**Responsible Physician:** Dr.Miri.

**Patient Presentation:**

-A 69 year old female with right breast invasive lobular carcinoma, which was positive for ER and negative for HER-2, had been underwent tumor excision with undetermined margins and no axillary staging.

-She had had prescribed Femara after surgery.

-The patient had past history of cardiac disease.

**Question:** Is more surgical intervention necessary?

**Recommended Plan:** Margin re-excision+SLNB.
