

Date: 13 April 2019 . 98/1/24.

Patient's Name: Z.E.

Responsible Physician: Dr.Mohagheghi.

Patient Presentation:

-A 42 year old female with past history of bilateral breast cancer, which had underwent BCS.

-She had strong family history of breast cancer and underwent BRCA testing, which was positive for BRCA2.

-Bilateral mastectomy has been proposed to patient, but she is reluctant to accept it.

Question: Is bilateral mastectomy and salpingo-oophorectomy warranted?

Recommended Plan: Bilateral mastectomy and salpingo-oophorectomy should be proposed, with more emphasis on bilateral salpingo-oophorectomy, as it is more necessary than mastectomy in her condition.
