

Date: 20 April 2019 . 98/1/31.

Patient's Name: M.S.

Responsible Physician: Dr.Kheradmand.

Patient Presentation:

-A 38 year old female with past history of bilateral breast cancer 15 years ago which underwent bilateral mastectomy and then adjuvant chemoRT.

-She presented with a mass adjacent to right mastectomy scar 4 years ago which was excised and reported to be dermatofibrosarcoma protuberans with clear margins; one year later she had recurrence which underwent re-excision with pathology report of high grade sarcoma in favor of MFH vs malignant melanoma with deep margin involvement.

-She underwent wide local excision with LD flap reconstruction with pathology report of high grade undifferentiated pleomorphic sarcoma. She received 30 sessions of RT.

-Now she has presented with an ulcerative 5cm mass in the same place which biopsy confirmed recurrence.

-In thoracic CT scan some pulmonary nodules and liver lesion is showed.

Question: Plan?

Recommended Plan: Liver MRI,PET(if patient can afford it),Chemotherapy.
