

Date: 4 May 2019 . 98/2/14.

Patient's Name: F.KH.

Responsible Physician: Dr.Aghili.

Patient Presentation:

-A 37 year old female with past history of left breast cancer (IDC) 4 years ago which underwent NAC, followed by BCS+ALND and adjuvant chemoRT.

-Last year she presented with flank pain and abdominopelvic CT scan was done which showed multiple lesions of adrenal and liver in favor of metastasis.

-Liver lesion was biopsied and metastatic neuroendocrine tumor(GATA+) was diagnosed.

Question: Are there any association between two diseases and pathologies?

Recommended Plan: Pathology review of breast and liver sample.
