

Date: 18 May 2019 . 98/2/28.

Patient's Name: S.H.

Responsible Physician: Dr.Omranipour.

Patient Presentation:

-A 39 year old female with retroareolar microcalcification in mammography underwent stereotactic VAB.

-Pathology review showed DCIS and she underwent central resection subsequently. Pathology examination reported IDC, T=6-8mm, G1-2, ER+, PR+, HER2 -, Ki67 30%.; because of invasive component, she underwent SLNB and there was no LN involvement in 4 sentinel lymph nodes.

-Now, PAM50 and OncotypeX tests are not available.

Question: Is adjuvant chemotherapy recommended?

Recommended Plan: Adjuvant chemotherapy is recommended.
