

Date: 25 May 2019 . 98/3/4.

Patient's Name: A.S.

Responsible Physician: Dr.Miri.

Patient Presentation:

-A 45 year old female with right breast cancer underwent skin sparing mastectomy and SLNB and immediate reconstruction with prosthesis.

-Pathology examination reported IDC(2mm),LVI+,DCIS(7cm), no LN involvement; superficial margin was focally involved by DCIS.

Question: What should be done about superficial margin involvement? Is RT warranted?

Recommended Plan: No RT or other intervention is needed.
