

Date: 6 July 2019 . 98/4/15.

Patient's Name: M.J.

Responsible Physician: Dr.Miri.

Patient Presentation:

-A 39 year old female with breast cancer underwent BCS+SLNB.

Pathology: IDC, T=9mm, G2, no LN involvement, ER+, PR+, HER2-, Ki67-7%.(In CNB ki67 was reported to be 30%).

Question: Is adjuvant chemotherapy is indicated?

Recommended Plan: IHC should be repeated on both CNB and surgery specimens; If it was still different or higher Ki was confirmed, adjuvant chemotherapy is recommended.
