

Date: 13 June 2019. 98/4/122.

Patient's Name: R.A.

Responsible Physician: Dr. Alipour.

Patient Presentation:

-A 41 year old female with past history of right breast cancer 4 years ago and skin metastases since 3 years ago-which has progressed despite different chemotherapy regimens- has now presented with suspicious left breast masses in mammography and ultrasound.

Question: Is diagnostic investigations and probable treatment of left breast is recommended?

Recommended Plan: Regarding patient's condition, no further work up and treatment is recommended.
