

Date: 2020/12/19 ;29/09/1399

Patient's Name: A.Gh.R

Responsible Physician: Dr.Omranipour.

Patient presentation:

- 38years

- Right Mastectomy is done.

-Pathology report; Extensive DCIS (Comedo type). Presence of a focus of Microinvasion.

-The tumor size is not measurable by certainty (about 50*30 mm)

Lower inner quadrant is involved by tumor in deep margin by tow foci of DCIS.

ER-; PR-; HER2+; Ki67 30%; SLN 0/5

-Question: Does she need Herceptin therapy?

Recommended tests: Pathology review of multiple sections and samples should be done.

Considered plan: depends on the result. If the invasive component is larger than 3 mm use Herceptin and Taxan for the patient.
