

**Date:** 2021/01/09;20/10/1399

**Patient's Name:** S.M.S.M

**Responsible Physician:** Dr. Vasigh

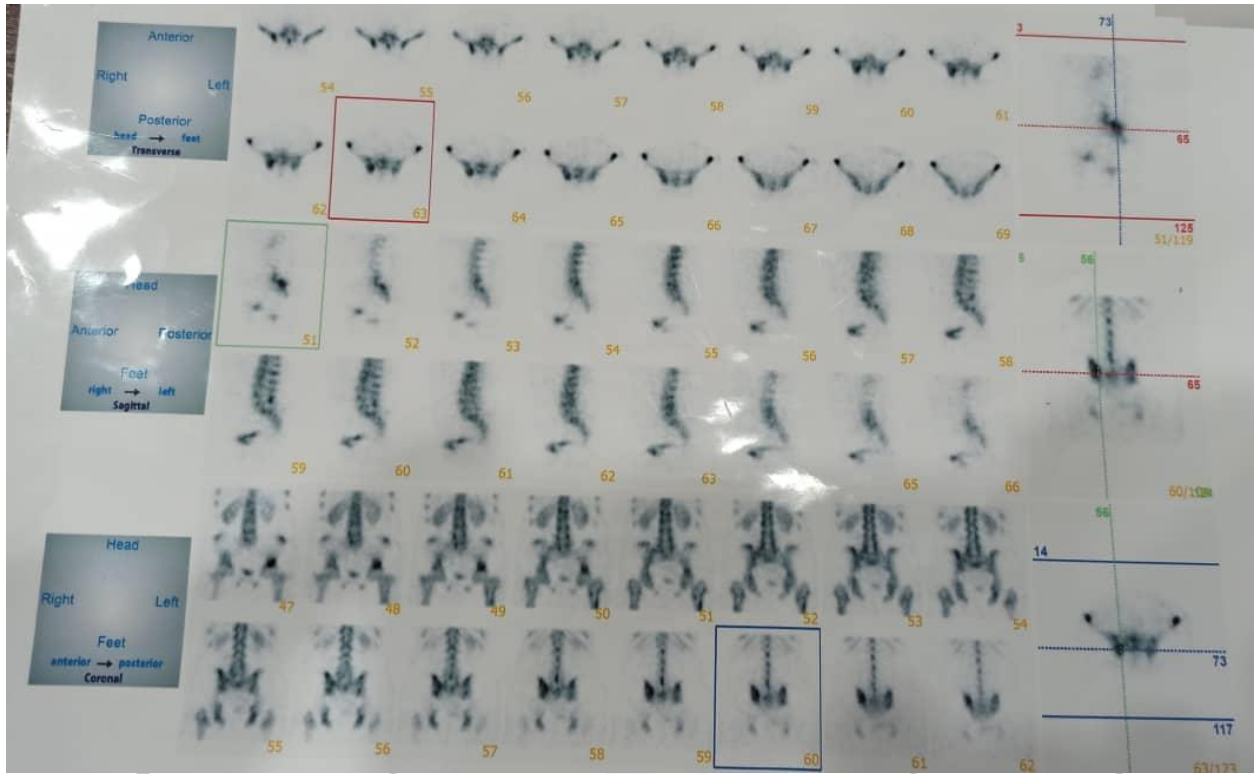

**Patient presentation:**

- 54years – positive family history (her niece)
- Presented 10 years ago with IDC (2.5 cm. Luminal A) plus DCIS. Lumpectomy done with involved margin.
- Received NO treatment afterward.
- 5 months ago, visited her doctor for ulcerated mass in right IMF (Infra mammary line)  
Core Needle Biopsy: IDC (Luminal A) (comedo type).
- Simultaneous Bone scan confirmed acetabulum and ilium involvement by tumor.
- Also, Right Subpleural nodule <1cm was found in spiral CT scan
- Now chemotherapy finished with good response and ulcer is faded.

**Question:** Candidate to be operated on for the primary site? (included in NIMAD plan?)?

**Considered plan:** If the patient accepts to participate in survey surgery is recommended and after that complete radiotherapy is mandatory.
