Date: 15.05.2021; 1400.02.25

Patient's Name: I.R

Responsible Physician: Dr. Ebrahimi

Patient presentation: A 84 year-old woman with right breast bloody discharge PEx: thickening in right upper (12-1oclock) & mobile mass in right UOQ & her right nipple is more prominent and stiffer.

PMH: HF(EF 30%) and cardiac pacemaker

DH: Rivaroxaban

US: B0

MG: NL, (Review: multicentric asymmetries and right retro nipple dense mass)

Question:

1.What is next Dx plan?

Recommendation:

- 1. Target U/S of right breast & US guided Bx is recommended at first.
- 2. Nipple open excisional Bx if guided Bx not feasible.
