

Date: 10.10.2020 ; 1399.7.19

Patient's Name: Z.B

Responsible Physician: Dr. Elahi

- Female, 37 years , negative family history of BC
- Nullipar
- Right breast centrolateral huge mass (8 cm)since 2 years ago
- Ultrasound: Right 7-12o'clock lobulated mass 85*60mm (BIRADS 4a)
- MRI: Right breast central & lateral lobulated mass 86*65mm (BIRADS 4b)
- Core Needle Biopsy: Benign phyllodes tumor or cellular fibroadenoma, (reactive Lymph node)
- Pathology (Excision): malignant phyllodes tumor
- Review pathology: High grade phyllodes tumor, Margin involved

Question: Is it safe to preserve the breast and do reexcision of margins(because of breast size it is feasible)?

Recommendations: Referring to most Guidelines: Because of the phyllodes huge size its characteristics should be considered like sarcoma

Answer: Explain the issue of follow up and probable results completely to the patient. She can decide one of these : 1.Radiotherapy-2.Mastectomy
+Radiotherapy
