

Date: 2020/10/31; 10/08/1399

Patient's Name: S.B

Responsible Physician: Dr. Omranipour

Patient presentation:

- 51years, negative family history
- Presented with left breast lesion. Ultrasound: BIRADS 3. mammography & Focal magnification view : BIRADS 0& 4
- 1month ago lumpectomy done (.IDC + DCIS)with indeterminate margins and true tumor size couldn't be assessed because of fragmented specimen .Tissue removed 5 cm tumor size 0.5 cm[ER+30% ; PR+40%; her2 - ; Ki67 25% - SLN 0/2]
- Post lumpectomy Mastectomy done and pathology: No Residue.

Question: Is chemotherapy necessary? Start of hormone therapy by tamoxifen or letrozole?

Recommended tests: Oncotype Dx. But because of unavailability its up to the patient to decide.

Considered plan: It is possible for her to only receive hormone therapy with tamoxifen
