**Date:** 24/3/99, 6/6/2020

**Patient's Name:** M. R

**Responsible Physician:** Dr. Sadighi

**Patient Presentation:**

A 62 year old female with right breast cancer

Immunohistochemistry: ER-, HER2+++

Neo-adjuvant chemotherapy

Surgery: mastectomy+ SLNB+ radiotherapy (1396)

She did not receive Herceptin

Recurrence in axillary region (1397)

Surgery: ALND

Pathology: involved 12 out of 17 lymph nodes

Treatment: chemotherapy+ Herceptin

Now there are thyroid mass and right supra-clavicular lymph node and pain

MRI: tumor contact with sub-clavian and axillary arteries

**Question:** What is the next plan?

**Recommended Plan:** Conservative treatments because of the extensive metastasis
