

**Date:** .99/4/21, 11/07/2020

**Patient's Name:** M. Kh

**Responsible Physician:** Dr Omranipour

**Patient Presentation:**

A 42 year old female with right breast mass

Sonography: 43 mm mass in breast tail (B4a)

Mammography: dense speculated mass in right retroareolar space and a dense right axillary lymph node (B4c)

Core needle biopsy breast and lymph node: Invasive ductal carcinoma

Immunohistochemistry: ER+, PR+, HER2+++ , Ki67 7%

**Question:** Is the axillary mass primary tumor?

**Recommended Plan:** Focal magnification view of breast+ right breast MRM
