

DATE: 99/4/28 18/07/2020

Patient's Name:

Responsible Physician: Dr. Mousavi

Patient Presentation:

A 44 year old female with right breast cancer

Mammography: multifocal carcinoma with all level axillary lymph nodes metastases

CT: 32*26 mm mass in UOQ

Bone scan: normal

Immunohistochemistry: ER+, PR+, HER2+

Neo-adjuvant chemotherapy 8 courses

Surgery: BCS+ SLNB

Pathology: size 4cm, LVI+, grade II, yPT2N0

Referred for adjuvant radiotherapy,

Imagings revealed a single blastic lesion in left iliac bone which was lytic at baseline assessment

Question: What is the next plan?

Recommended Plan: Review of imaging+ biopsy
