

Date: 1 Aug 2020. 99/5/11.

Patient's Name: Z. H.

Responsible Physician: Dr. Omranipour

Patient Presentation:

- A 67 Y/o female with right breast cancer
- Surgery: 1394 BCS
- Immunohistochemistry: luminal B
- Adjuvant treatment: chemotherapy, radiotherapy, letrozole
- now: vacuum biopsy because of an asymmetric density in her left breast
- pathology: small focus IDC
- Immunohistochemistry triple negative
- Surgery: BCS+SLNB
- Pathology: there is no tumor in the sample and lymph nodes

Question: Given the small amount of tumor in the vacuum, does she need chemotherapy? Does she need radiotherapy?

Recommended Plan: she should receive radiation and letrozole??
