

Date: 19 Sep 2020. 99/6/29.

Patient's Name: Z. A.

Responsible Physician: Dr. Mashayekhi

Patient Presentation:

- A 34year old female, locally advanced metastatic breast cancer
- Stage: T3N2
- Pathology: IDC
- Chest CT scan: multiple bilateral lung metastases
- Abdominopelvic CT scan: 2 liver metastases in both lobes
- Adjuvant treatment: chemotherapy
- Stage: T4N2
- Chest and Abdominopelvic CT scan: good response to chemotherapy

Question: What is the next plan?

Recommended Plan: Request IHC, if HER2 is positive then anti-HER2 therapy should started, if HER2 is negative palliative mastectomy is recommended.
