

Date: 17.4.2021;1400.1.28

Patient's Name: Z.S.R

Responsible Physician: Dr. Omranipour/Dr.Borjian

Patient presentation: A 52 year- old woman with right breast cancer who underwent NAC and MRM last month, therefore she presented skin lesion and local recurrence before RT

Pathology: IDC, T=7cm, triple negative, involved sup margin, 22 positive LN, (T4N2)
Mets W/U: negative

Question:

What's the next plan?

Recommendation:

- 1.Genetic Test and consult
2. PET scan after 1.5 month and re excision if she does not have any distant cutaneous nodul .
