

Date: 2021/02/13; 25/11/1399

Patient's Name: F.E

Responsible Physician: Dr. Jalaifar

Patient presentation:

- 48years – negative family history
- Presented with (1397) right breast mass (5cm) assumed benign without any intervention.
- (1399) The same mass recent size in Ultrasound:9 * 5 cm (BIRADS4b).
- Core Needle Biopsy: Benign fibroepithelial lesion plus Sclerosing adenosis compatible with complex fibroadenoma. Mild to moderate UDH. Apocrine metaplasia
- Surgical pathology: specimen size 13*7.5*6 cm Benign phyllodes tumor; surgical margins are tangential to the tumor.

Question: Shall we do reoperation?

Considered plan: No need for any action.
