Patient's Name: F.N

Responsible Physician: Dr..Shahi

Patient presentation:

- 78years –

- Presented with breast tumor mass in poor general condition hit by progressive parkinson's Disease and debilitated.

-Received hormone therapy for 1 month with good response and considerable declining size of mass, after which: Mastectomy is done

-Pathology report: 2 masses each 1.5cm of IDC; Grade2; ER+100%; PR+100%; Ki67 40%;3out of 9 lymph nodes involved by tumor.

Question: Regarding too many probable side effects of chemotherapy and her comorbidities is it necessary?

Considered plan: Because of general condition chemotherapy can be omitted only recommend hormone therapy.
