

Date: 2021/03/06;16/12/1399

Patient's Name: Dr. Sh. M

Responsible Physician: Dr. Jalaifar.

Patient presentation:

- 32years –repeated case from previous week.

-Pathology report of breast mass: Metastatic carcinoma of lung origin.

IHC study revealed positive neoplastic cells for CKAE1/3, CK&, TTF1,

But negative for CK20, GATA3, PAX8, inhibin, melanin, ER, PR & Her2.

-DHS (Dynamic hip screw) of femoral neck is done and also radiotherapy plans for both her spines and femur.

Recommended tests: Brain MRI is mandatory. Check PDL1 in order to consider probable immunotherapy. Genetic mutation evaluation for likely target therapy otherwise if negative one, chemotherapy be done.

Considered plan: Continue palliative therapy.
