

Date: 03.07.2021;1400.04.12

Patient's Name: M.N

Responsible Physician: Dr.Daryaee

Patient presentation:

A 40 year-old woman with right breast LCIS (hormone receptor+) in VABx;
She has planned to be pregnant in recent future.

FH: positive

Mammography: Right UIQ distortion and involvement from superior to inferior in mammography review

US: multiple bilateral lesions (B4)

Question:

What is the next plan?

Recommendation:

- 1.Genetic consult.
- 2.Right side mastectomy and left B4 lesion CNBx is recommended.
