

Date: 07.08.2021; 1400.05.16

Patient's Name: Z.R.A

Responsible Physician: Dr.Alipour

Patient presentation:

A 45 year old, known case of right breast cancer and mastectomy since 3 years ago, recently presented metastatic skin lesion in mastectomy bed.
Skin Metastasis: ER+ (70%), PR-, HER2+, Ki67 25%

Question:

What's the next plan?

Recommendation:

- 1.Compare with pervious Physical exam by clinic records.
- 2.Local paliative surgical treatment(resection and LD flap)
