Patient's Name: S.Gh

Responsible Physician: Dr.Ebrahimi

Patient presentation:

A 76 year-old lady with a slow growing mass in retroalrolar region of left breast
In US: there were two spiculated tumors, 17 & 31 mm in largest dimension.

CNBx: IDC, G1/3, ER +, PR +, HER- , Ki67 2-5%

She underwent mastectomy and SLNB: one tumor, 2.7 cm,invasive mucinous carcinoma,SLNB 0/1 involved, ER +PR +HER2- Ki67 negative[?!?], deep margin involved by tumor

Question:

What's the next plan?

Surgical or Medical plan?

Recommendation:

1.Reexcision of surgical margins then hormone therapy is recommended.
