Patient's Name: G.H

Responsible Physician: Dr.Alipour

Patient presentation:

A 57 year-old woman with left UIQ density in mammography underwent excisional biopsy(DCIS, free margins) then NSM & SLNB & TRAM flap reconstruction was done

CNBx: papillary lesion

Pathology: DCIS (2 foci, 1.5cm&0.7cm) & foci of micro invasion, 0/4 SLNBx, free margins (also under NAC), ER+, PR+,

Question:

What is the next plan?

Recommendation:

1. Hormone therapy (tamoxifen or Letrozole)
2. Close F/U because of NAC sparing & close margin under NAC
