

Date: 19.02.2022; 1400.11.30

Patient's Name: E.A

Responsible Physician: Dr.Motamedi

Patient presentation: A 56 year-old lady with right breast cancer that underwent partial mastectomy after 8 sessions of neoadjuvant chemotherapy.

Pathology: IDC, DCIS+, G3, ER+, PR+, HER-2 negative ,Ki 67 25%, 3.4 cm, margin free, LVI +, 3/4 LNs are involved

She underwent radiotherapy & received letrozole.

4 months ago she presented with erythema in surgical scar in UOQ & had 8 kg weight loss.

Sonography: fat necrosis

Question:

What's the next plan?

Is it local recurrence? Is PET needed? Is biopsy needed?

Recommendation:

Skin lesion biopsy & thoracic & abdominopelvic CT & bone scan.
