

**Date:** 25.12.2021; 1400.10.04

**Patient's Name:** M.H

**Responsible Physician:** Dr.Omranipour

**Patient presentation:** A 35 year-old lady presented with right breast cancer & left breast masses;underwent BCS & SLNB.

**Pathology right breast:** IDC, G2, 1/5 cm, DCIS, LVI -, PNI -, luminal A, margins free, 6 LNs negative

**Pathology left breast 1 o'clock:** intraductal papilloma, usual ductal hyperplasia, cystic apocrine metaplasia, sclerosing adenosia, microcalcification

**Pathology left breast 5-6 o'clock:** radial scar, columnar cell changes, usual ductal hyperplasia, cystic apocrine metaplasia, microcalcification

**Question:**

What's the next plan?

**Recommendation:**

Oncotype /mammprint is recommended and then we should make decision according to its result and if oncotype/mammprint is not possible then chemotherapy is recommended (4courses).
