

Date: 09.04.2022; 1401.01.20

Patient's Name: A.K

Responsible Physician: Dr.Gity

Patient presentation: A 42 year-old woman with firmness in LOQ of her right breast.

She is pregnant and her gestational age is 7 weeks.

Sonography: 30 mm mass at 9-10 o'clock of her right breast

MRI: segmental NME in LOQ of her right breast 100*30*25 mm and several adjacent masses (B5)

15 mm mass in her right breast lateral near zone (B4)

Pathology: DCIS intermediate grade in solid and cribriform pattern

Question:

What is the treatment plan?

Recommendation:

1-She should undergo NSM and DTI.

2-BCS is suggested considering recurrence risk acceptance by the patient.
