

**Date:** 09.04.2022; 1401.01.20

**Patient's Name:** M.J

**Responsible Physician:** Dr.Mousavi

**Patient presentation:** The patient is known case of left breast HER-2 3+ cancer. She underwent surgery and chemoradiotherapy 4 years ago.

T=3mm LN: 22/25

She presented with left axillary LAP.

**PET:** multiple LAP in left supraclavicular and 1 LN lower than thyroid.

She treated with 6 courses of chemotherapy and in repeated PET scan; LAP had good response to treatment.

**Question:**

Can we do curative treatment?

Should we resect lymph nodes or repeating RTX is necessary?

**Recommendation:**

Thyroid FNA and axillary MRA.
