

**Date:** 15.01.2022; 1400.10.25

**Patient's Name:** M.B

**Responsible Physician:** Dr.jalaeefar

**Patient presentation:** A 64 year-old lady who presented with left breast mass in 1398.

Sonography: left breast mass 22mm in 1 o'clock & 8mm mass in 12 o'clock

CNB:IDC, tripple negative, Ki67: 30-40 %,

Bone scan: multiple bone metastases (may be DJD in review)

She underwent chemotherapy.

2 months ago her disease progressed under treatment

CT: pulmonary nodules up to 9 mm

**Question:**

What's the next plan?

**Recommendation:**

Primary site surgery is recommended.
