Patient's Name: Z.K

Responsible Physician: Dr.Miri

Patient presentation: A 34 year-old lady that presented with bilateral bloody nipple discharge in 1398.

MRI: right breast Intraductal papilloma B3

Sonography: B4b

Mammography: B3

VAB bilateral: no malignancy

She underwent right & left duct excision.

MRI: bilateral duct ectasia.

In 1399 she underwent bilateral lumpectomy & nipple biopsy result was negative.

Now she has bilateral nipple discharge

PE: normal

Imaging: normal

Question:

What's the next plan?

Recommendation:

Follow up & mammography & psychological consult.
