

Date: 12.02.2022; 1400.11.23

Patient's Name: S.Kh

Responsible Physician: Dr.Mousavi

Patient presentation: A 67 year-old lady that underwent mastectomy.

Pathology: IDC, 1/3 cm, 5/5 LN+, G3, luminal B, Ki67: 35%,

Bone scan: T2, T9, posterior arc of 3rd rib ,suspicious for metastasis (in review T2, T9 had metastatic lesion)

MRI: positive for metastasis.

Recommendation:

Systemic therapy & XRT are recommended.

It is better to do PET/CT.
