

Date: 12.03.2022; 1400.12.21

Patient's Name: F.M

Responsible Physician: Dr.Aghili

Patient presentation: A 64 year-old lady presented with left breast pain.

Mammography: speculated mass in left breast which is associated with breast deformity and skin & nipple retraction & bilateral lymphadenopathy.

Mass biopsy: IDC with lobular feature/ luminal B Ki67 16% / E-cadherin (-)

Right axillary LN biopsy: involved by carcinoma.

In metastasis work up she had increased uptake in 4th rib (suspicious for metastasis)

Question:

What's the next plan?

Recommendation:

Breast MRI, IHC of left axillary lymph node, curative treatment and PET scan are suggested.
