

Date: 06.11.2022; 1401/03/21

Patient's Name: Z.P

Responsible Physician: Dr.Omranipour

Patient presentation: A 22 year-old woman with breast skin ulcerative lesions from 4 years ago

P/H: pituitary microadenoma (treated with cabergoline)

Pathology: vasculopathic tissue pattern with fibrinoid necrosis and eosinophilia churg strauss syndrome is compatible

She was treated by dermatologist and rheumatologist with prednisolone, mtx, cholchicine and azaram but there was no response

From 1399 cyclophosphamide was ordered for her and the lesions had response.

5 months ago because of breast abscess I&D was done for her.

Now she has diffuse breast skin lesions.

Question:

What is the treatment plan?

Recommended plan:
