

**Date:** 07.29.2022; 1401/05/08

**Patient's Name:** N.Kh

**Responsible Physician:** Dr.Omranipour

**Patient presentation:** A 42 year-old woman with left arm pain and left axillary mass in 1397

**CNB:** lymphoproliferative disorder

Chemoradiotherapy was done for her

**PET scan 1399:** Left arm hypermetabolic mass

**CNB:** diffuse large **B cell** lymphoma

She underwent chemoradiotherapy.

**PET scan 1400:** 2 hypermetabolic LNs in left axillary (level I, II)

RT was done for her.

From 2-3 months ago she presented with a large mass in left axilla

**PET scan 1401:** conglomerated LN in all level of left axilla with extension to left supraclavicular region and invasion to the chest wall muscle

**Question:**

Is the mass operable?

**Recommended plan:**

Mass is not operable.
